

What Is Coredeux?

[Previous: Documentation Home](#) | [Documentation Home](#) | [Next: Getting Started In 10 Minutes](#)

Coredeux is a framework for enterprise Java applications that need a shared, governed way to handle common work.

The homepage now carries the fuller story. This page is just the short bridge into the hands-on material.

If you want the fast version, think of Coredeux as the runtime layer that keeps the repeated enterprise pieces consistent:

- validation
- hooks
- audit
- import and export
- backend routing
- extension points

Use the next pages for the hands-on walkthrough and the deeper framework map:
